GEAR INDUSTRY

AYNA MAHRUTİ |
PINION & CROWN WHEEL

1-BAKIM (MAINTENANCE)

1-1 YAĞ SEÇİMİ (OIL SELECTION)

Yağ seçimi Ayna-Mahrutinin iyi çalışmasına doğrudan etkisi vardır.Uygun olmayan yağ Ayna-Mahruti ve diğer bütün bileşenlerinin ömrünü de ciddi oranda azaltmaktadır.Lütfen bakımı yapılan aracın kılavuzunda önerilen yağları veya API GL5 bir yağ tercih ediniz.

Oil selection has a direct effect on the functioning properly of the Crown & Pinion Set. Unsuitable oil also significantly reduces the life of the Crown & Pinion and all its other components. Please, choose any of the oils as recommended in the manual of the vehicle that is being maintained, or a lube in class of API GL5.

1-2 YAĞ SEVİYESİ (OIL LEVEL)

Yetersiz yağlama Ayna-Mahruti ve bileşenlerinin ömrüne ciddi oranda olumsuz etkisi vardır.Yağ seviyesi yeterli seviyede değilse derhal aracın kılavuzunda önerilen yağlardan biri ile ya da orijinali ile aynı türde olan viskoziteye sahip muadil bir yağ ile uygun seviyeye kadar doldurun.Kesinlikle türü ve viskozitesi farklı olan bir yağ ile karıştırmayınız.

Insufficient lubrication has a serious negative effect on the life of the Crown & Pinion Set and its other components. If the oil level is not adequate, then fill immediately with one of the oils recommended in the vehicle's manual, or with an equivalent oil that in the same type with the original lube and having the same viscosity with it, up to the appropriate level. Please, never do mix it with an oil that is having a different type or viscosity!

1-3 YAĞ DEĞİŞİMİ (OIL CHANGE)

Zaman içinde yağ kirlenip bozulur ve yağlama özelliğini kaybeder.Özellikliğini kaybetmiş bir yağlama ile çalışma sıcaklığı artar.Dolayısıyla Ayna-Mahruti ve bileşenleri hızla bozulur.

In the course of time, by getting dirty, the oil degrades and loses its lubricating property. With a lubrication that has already lost its properties, the operating temperature increases. Consequently, the Crown-Pinion Gear Set and its components damage quickly.

1-4 BİLEŞENLER (COMPONENTS)

Uygun ve uzun ömürlü bir çalışma için bütün bileşenlerin dikkatlice gözden geçirilmesi ve hasarlı olan bileşenlerin değiştirilmesi gerekir.Rulman,somun,cıvata,pul,conta ve burç gibi düşük maliyetli bileşenlerin her bakımda değiştirilmesini tavsiye ederiz.

For proper operation and long-lasting lifetime, all components must be carefully inspected and the components which has gotten damaged be replaced. We recommend replacing low-cost components such as bearings, nuts, bolts, washers, gaskets and bushings, at every routine maintenance time.

2-DİŞLİ BOŞLUĞU (GEAR BACKLASH)

Montaj işleminden önce uygun dişli boşluğu tespit etmeniz gerekir.Uygun dişli boşluğunu aşağıdaki talimatlara uyarak tablodan bulabilirsiniz.

Prior to assembling process, you must detect the appropriate gear backlash. You can ascertain the appropriate gear backlash value from the chart in below, by following the instructions.

Aynanın dış çapını bir kumpas ile ölçün.(D)

Aynanın diş sayısını belirleyin.(Z)

D ve Z değerlerini aşağıdaki formüle uygulayın.

$M=D:Z$

Measure the outside diameter of the Crown Wheel with a caliper (D)

Count the teeth number of the Crown Wheel (Z)

Apply the D and Z values to the formula below.

Module= $D:Z$

Yukarıda bulduğunuz M değerini kullanarak tablodan önerilen dişli boşluğunu belirleyin.

Using the M value you calculated above, determine the recommended gear backlash from the adjacent table.

MODÜL – MODULE M
5,08-6,35
6,35-7,26
7,26-8,47
8,47-10,16
10,16-12,70
12,70-14,51
14,51-16,93
16,93-20,32
20,32-25,40

Dişli Boşluğu-Gear Backlash	
min (mm)	max
0,129	0,161
0,161	0,184
0,184	0,215
0,215	0,258
0,258	0,322
0,322	0,368
0,368	0,430
0,430	0,516
0,516	0,645

Çapsal Adım-Diametral Pitch P
4,00-5,00
3,50-4,00
3,00-3,50
2,50-3,00
2,00-2,50
1,75-2,00
1,50-1,75
1,25-1,50
1,00-1,25

Dişli Boşluğu-Gear Backlash	
min (inc)	max
0,005	0,006
0,006	0,007
0,007	0,008
0,008	0,010
0,010	0,013
0,013	0,014
0,014	0,017
0,017	0,020
0,020	0,025

Örnek (Sample):

D = 435 mm

Z = 40

$M = 435:40 = 10,87$

3-BASMA İZİ AYAR(Gear Tooth Contact Pattern Adjustment)

Ayna-Mahruti dişlisinin maksimum düzeyde sessiz ve dayanıklı olabilmesi için basma izinin uygun olması son derece önemlidir. Basma izi, ayar şimlerini ekleyerek ya da çıkararak ayarlanabilir. Aşağıdaki talimatı uygulayarak basma izi uygun pozisyona getirebilirsiniz.

For being able to of the Crown & Pinion Gear Set silent and durable at the maximum level, it is extremely important that the gear tooth contact patch is appropriate. The contact pattern can be adjusted by adding or removing of the shims. You can bring the contact pattern to the proper position by following the instruction below.

DİŞLİ BOŞLUĞU (Gear Backlash)
MAHRUTİ MESAFESİ (Pinion Distance)
BASMA İZİ (Contact Pattern)

SAĞ AYNA DİŞLİSİ
(RIGHT CROWN WHEEL)

SOL AYNA DİŞLİSİ
(LEFT CROWN WHEEL)

: DOĞRU (CORRECT)
: YANLIŞ (WRONG)
: YANLIŞ (WRONG)

Basma izi dişin üst bölümünde yer alır.Gürültü ve erken aşınmaya sebep olur.
The contact pattern takes place in the upper section of the tooth. It causes noise and premature wear.

DİŞLİ BOŞLUĞU (Gear Backlash)
MAHRUTİ MESAFESİ (Pinion Distance)
BASMA İZİ (Contact Pattern)

SAĞ AYNA DİŞLİSİ
(RIGHT CROWN WHEEL)

SOL AYNA DİŞLİSİ
(LEFT CROWN WHEEL)

: DOĞRU (CORRECT)
: DOĞRU (CORRECT)
: DOĞRU (CORRECT)

DIŞ BÜKEY (TAHRİK) TARAFI
CONVEX SIDE

İÇ BÜKEY (TAHRİKSİZ) TARAFI
CONCAVE SIDE

Basma izi dişin yüksekliğine ve yanak genişliğine ortalanır ve dış bükey (tahrik) tarafından biraz daha uca doğru ayarlanır.
Contact pattern is centered according to height of the teeth and the face width, and also it adjust towards to the tip little bit more that at the convex (drive) side.

DİŞLİ BOŞLUĞU (Gear Backlash)
MAHRUTİ MESAFESİ (Pinion Distance)
BASMA İZİ (Contact Pattern)

SAĞ AYNA DİŞLİSİ
(RIGHT CROWN WHEEL)

SOL AYNA DİŞLİSİ
(LEFT CROWN WHEEL)

: DOĞRU (CORRECT)
: YANLIŞ (WRONG)
: YANLIŞ (WRONG)

Basma izi dişin alt bölümünde yer alır.Gürültü ve erken aşınmaya sebep olur.
The contact pattern is takes place in the bottom section of the tooth. It causes noise and premature wear.
